Humble Homemade HiFi – Capacitor Test ratings *

*A rating is only part of the story. A capacitor is one of many parts in a HiFi system. It’s all about the right combination! This means that it is very well possible that in a certain system a capacitor rated 8 points can sound better than a capacitor rated 10 points. Please read the full Cap Test for more information about each capacitor. Capacitors marked with a black dot are my personal favourites.
